## One Tool Performs Multiple Applications

K P M N S

# NC Helix Drill Helical Interpolation 

## Principle

## ม17n g.

# NC Helix Drill Milling, Drilling \& Slotting 

Cuts material by helical interpolation; serrated cutting edge minimizes chip length. Low spindle power is required, good for drilling material that generates long, soft chips.

## $20^{\circ}$ Ramping Angle

Either linear or circular ramping.

## Reduce Your Tool Inventory

Only six tools for making Ø .512"~Ø2.65" (Ø13~Ø65mm) hole from solid.

Each holder can machine different diameters and hole depths, saving your tool inventory and cost! No need to peck drill or dwell in operation, even without internal coolant.

## Contents <br> Insert <br> 03 <br> Holder $2=03$ <br> Technical Guide крmмs " 05 <br> Application

## 01

Feature
<Page 11>

## Lower Spindle Power Consumption

 Easy to cut!
© Thanks to the small cutting load of the serrated cutting edge and helical interpolation, low power consumption of the spindle is required.

- Circular ramping milling, maximum ramping angle is $20^{\circ}$. For example: tool HD27 machining Ø1.969" ( 50 mm ) hole, . $354^{\prime \prime}$ ( 9 mm ) pitch for aluminum, $.236^{\prime \prime}$ ( 6 mm ) pitch for carbon steel.

Feature
<Page 11>

Example:

## Only six tools for drilling

 Ø.512"~Ø2.65" ( $\varnothing 13 \sim 65 \mathrm{~mm}$ )Example

- Cuts by helical interpolation.
: Each holder can machine different diameters and hole depths.

## 03

Feature
<Page 10>

## Special insert geometry for cutting different materials

Serrated cutting edge makes the chips short and small, and easier to evacuate.
© Eliminate swarf and vibration problems while drilling difficult or deep holes.

## One tool performs multiple applications

- Not only a drill, but an end mill too.
- Small radius path to cut a hole or step hole, various curved cavity shapes on different materials.

## Roughness Measuring

## Feature <Page 10> 06

Workpiece
Make "One more turn" after reached the depth.
Ex:
$\vdots$
G03 I-1.5 Z-30 P5
G03 I-1.5 <make one more turn >
G01 X0 Y0 < afterward, let tool back to center of hole >

Flatness

## Specification

## Insert

NC2032 : For general purpose. Suitable for almost any material. Top recommendation is $2 \times \mathrm{Dc}$ machining, high performance cutting.

## Holder <br> Cylindrical Shank

## - Helical chip-removing groove >>

- Designed for CNC machines with external coolant
- Unique helical groove design generates chip-removing coolant stream.
- The helical groove is designed for the coolant to remove swarf from the cutting zone.
- For horizontal machining, it is necessary to increase coolant volume.

$3 \longdiv { } 3$ 99321-025-4265 is $\varnothing 0.984$ " Side Lock Shank with internal coolant. * Maximum ramping angle refers to maximum pitch. Please see page 6 .

## Screw Fit Cutter

## - Internal Coolant

- Designed for CNC machines with internal coolant.
- Standard screw-fit body adapts to almost any kind of the screw-fit tool holder or extension bar in the market.
- Use for enlarge hole.
* Use open ended spanner

## Technical Guide

※ Before you start, please pay attention the following conditions
Flatness on blind
hole bottom
Make one more turn
after reaching depth.
Ex.
G03 l-1.5 Z-30 P5

## A Choosing a suitable drill body.

- Required hole diameter is within the recommended range (blue numbers).
- Required hole diameters ( more than one size), choose the drill can cover more different hole diameters. Example 0.709", 0.787" and 0.866" hole diameter, choose 99323-012-1525.
- Hole tolerance : 0/-0.02 inch.

| Drilling diameter | Coolant type | Max. drilling depth | Tool type | Dc | Insert type | Re | Max. pitch | Max. Ae |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Application Example

## -Special insert geometry for cutting different materials>>

- Serrated cutting edge makes the chips short and small, and easier to evacuate.
- Recommended for almost all material types, good for drilling material that generates long, soft chips.

- To cut Titanium in different conditions >>

- To produce step hole Ø2.106" \& Ø1.772" with one tool >>

## -

Each holder "NC Helix Drill" can machine different diameters and hole depths.
Producing a Ø2.362" x 1.063" hole with just one tool.
Eliminates $2^{\text {nd }}$ operation from the process. Machine load 8\%. >>

- Requires low spindle power!

BT30 machine, Ø1.181" hole diameter, 3.3xDc drill depth >>

|  | * 3000 r.p.m. is used. |  |  |  |  |  |  |  |  |  |

- Drill bigger holes using lower power spindles. Increase flexibility and occupy fewer tool positions in CNC machines.

## - Replace your end mill with an NC helix drill.

Make the impossible become possible >>

- One tool performs multiple patterns. >>

Not only a drill, but an end mill too. Maximum ramping angle is $20^{\circ}$.
Small radius path to cut holes, countersink holes, and create various cavity shapes in different materials.
Less inventory of different sizes of drills and indexable end mills, NC Helix Drill cuts it all !
